

# BLIP Operations April 22-29, 2013

- Routine production of Sr-82 continued at 117 MeV.
  - There were no target manipulations of any kind, no energy changes , no tuning variations for R&D, no maintenance. This led to very stable operation of 167.4 out of 168 hr with beam – an all time record! Intensity was good with the weekly average at 101.5 $\mu$ A.
- Operations at the Target Processing Lab (TPL) remain shutdown.
  - CAD and LESHC approved restart yesterday upon implementation of corrective actions (both procedural and physical). DOE area office approval still required.
  - Restart is needed today to be able to meet Sr-82 shipment date of Friday May 3.
